

Following are the Bad Requirements to test activities:

2. System shall allow searching without setting search parameters-This is not satisfy search the result because in Requirement 1 searching should perform using search criteria. Without search parameter system should not display results. If user want smoking allowed workplace or equipment having only PC then how system will display the result. Without search parameter user click on search system should display error message and no result found.

4. System shall allow searching only for the date range that is not in the past-This is not understand by user which past date is not take by system. What is the range of past date should not take by system.

10. Search result table shall be read only-If the flexible navigation between the results then how it should be read only. If system show result ready only then navigation between result is not possible. But navigation between result should be necessary to see the result.
