Task 2

Rough estimation with WBS

Rough estimation of test activities

To get the estimation of Search Workplaces functionality testing, Overall testing process can be broken down into tasks such as

1 Test Planning-0.5 day

- Define testing objectives and scope for search workplaces functionality.
- Identify testing resources required for search workplaces functionality testing.
- Determine test methods and techniques for search workplaces functionality testing.
- Develop a test plan and schedule for search workplaces functionality testing.

2 Test Design – 1.5 day

- Identify test scenarios and cases for search workplaces functionality testing.
- Develop test cases for positive and negative test scenarios.
- Create test data for search workplaces functionality testing.

3 Test Execution – 2 days

- Execute test cases for Search workplaces functionality testing.
- Verify that users can Search workplaces with valid input.
- Verify that users cannot search workplaces with invalid input.
- Verify that error messages are displayed for invalid input.
- Test the checkbox smoking allowed functionality.
- Test the select Equipment functionality.

4   Defect Management – 2 days

- Report and track defects found during Search workplaces functionality testing.

- Verify that defects have been fixed in subsequent releases.

- Retest defects to confirm they have been resolved.

5   Test Closure – 0.5 days

- Analyze the results of search workplaces functionality testing.

- Create a test report for Search workplaces functionality testing.

- Evaluate the overall success of the testing effort for search workplaces functionality.

- Identify and document any lessons learned from search workplaces functionality testing.
